PROFESSIONAL SUMMARY

Results-driven Cyber Security Analyst and SOC Analyst with 1+ year of hands-on industry experience in VAPT, web application security, network security, SIEM monitoring, and incident response. Proficient in Burp Suite, Nmap, Metasploit, Nessus, Wireshark, OWASP ZAP, SQLmap, Aircrack-ng, and Ettercap. Identified and remediated critical vulnerabilities — SQL Injection, XSS, Broken Authentication, IDOR, MITM, and OWASP Top 10 flaws — across 10+ real-world client environments. Familiar with NIST CSF, ISO 27001, CVSS scoring, and CVE analysis. Holds an M.Sc. in Cyber Security and Ethical Hacking.

TECHNICAL SKILLS

Security Domains: VAPT, Web Application Security, Network Security, SOC Analysis, Threat Detection & Intelligence, Incident Response, Vulnerability Management, Patch Management, Risk Assessment, SIEM Log Monitoring, Cyber Threat Intelligence (CTI), Zero-Day Vulnerability Research, Wireless Security, Container Security, Endpoint Security, Reconnaissance, Social Engineering

Security Tools: Burp Suite, Nmap, Metasploit Framework, Nessus, Wireshark, OWASP ZAP, SQLmap, Hydra, Nikto, Aircrack-ng, Ettercap, Trivy, Docker

Frameworks & Standards: OWASP Top 10, NIST CSF, ISO 27001 (Awareness), CVE/CVSS Analysis, IDS/IPS, ARP Poisoning Detection, Container Hardening, TCP/IP, OSI Model

SIEM & Monitoring: Log Analysis, Alert Triage, Event Correlation, Endpoint Detection, Splunk (Basic), Security Event Monitoring

OS & Programming: Kali Linux, Ubuntu, Windows Server | Python, Bash, PowerShell, C, C++, HTML, CSS, MySQL

Cloud & Tools: Docker, Basic Cloud Security (AWS/Azure), Git, GitHub, Visual Studio Code

EDUCATION

Master of Science – Cyber Security and Ethical Hacking

Boston Institute of Analytics, Pune

Completed: June 2025

Bachelor of Computer Applications (BCA)

Krishna College of Management, Shivaji University, Kolhapur | 60.00%

June 2022 – April 2025

Higher Secondary Certificate (HSC)

Krishna College of Commerce and Science, Shivaji University, Kolhapur | 76.17%

June 2020 – April 2022

PROJECTS

Python-Based Vulnerability Scanning Tool | Python, Nmap, Socket, HTML Reporting

2025

- Built an automated vulnerability scanner with Nmap port scanning, OS fingerprinting, and customizable scan profiles (quick/full/stealth); generated HTML reports with CVSS-based alerts, reducing manual scanning time by 60%.

Malware Detection – File & Process Monitoring | Python, YARA, psutil, Real-Time Alerting

2025

- Developed a real-time file and process monitoring tool using Python and YARA rules to detect malware signatures, unauthorized modifications, and suspicious processes; achieved sub-5-second alert response, reducing manual monitoring workload by 70%.

Ransomware Attack Detection System | Python, File Integrity Monitoring, Entropy Analysis

2026

- Designed a ransomware detection system using file entropy analysis, access pattern monitoring, and extension change tracking; achieved 92% detection accuracy with automatic process termination to minimize data loss — simulating EDR blue team capabilities.

WORK EXPERIENCE

Cyber Security Analyst | Gigante Technologies Pvt. Ltd., Pune, India

Nov 2025 – May 2026 (Full-Time)

- Performed full-cycle VAPT for web applications and network infrastructure across 10+ client environments, identifying and remediating 50+ vulnerabilities including SQL Injection, XSS, IDOR, and Broken Access Control; reduced client risk scores by ~40%.
- Executed OWASP Top 10 testing, documented findings with CVSS severity scores, and delivered actionable remediation reports to stakeholders; achieved 100% closure rate on critical findings within SLA timelines.
- Performed threat detection, log monitoring, and incident triage; collaborated with dev and IT teams for patch verification and post-remediation re-testing.

Cybersecurity Specialist (On-Job Training) | NewtonAI, Remote

Nov 2025 – May 2026 (6-Month OJT)

- Broken Authentication & Wi-Fi Auditing: Assessed session fixation, credential stuffing, and weak login mechanisms across 5+ environments; built a wireless lab using Aircrack-ng to capture WPA/WPA2 handshakes and demonstrate dictionary attacks, with IDS/IPS-based mitigation recommendations.
- Container & Web App Security: Deployed Docker-based vulnerable apps, performed Trivy CVE scans identifying 30+ CVEs; conducted OWASP ZAP reconnaissance identifying XSS and SQLi vulnerabilities across 3 target applications with detailed remediation plans.
- MITM Simulation & OSINT: Simulated ARP poisoning attacks via Ettercap/Wireshark, identified compromised credentials, and recommended HTTPS/VPN mitigations; performed Google Dorking to discover exposed data and documented ethical use cases and remediation steps.

Cyber Security Job Simulation | Deloitte (Forage), Remote

April 2026

- Completed Deloitte's virtual cyber security simulation covering threat analysis, incident response workflows, and security consulting; analysed simulated security incidents, produced structured findings reports, and applied NIST/ISO-aligned risk assessment methodologies.

CERTIFICATIONS

- Certification in Cyber Security and Ethical Hacking — Boston Institute of Analytics
- Cyber Security Job Simulation — Certificate of Completion — Deloitte (Forage)

2025

April 2026
